

# Tool Junkie

YOUR SUPPLIER of  
WOODWORKING  
MACHINES & TOOLS

In the early spring of 2002 the Tool Junkie first opened their doors in the old country Town of Stouffville. Since then, your enthusiastic response of our unique and high quality product lines has been tremendous. This has prompted us to publish our first Newsletter keeping you up to-date on all current and the very latest new products.

We hope you will take a moment and drop by the tool junkie and check out all the General products... Happy Woodworking.

# "To Clamp or not to Clamp"

**I**t really is a question. Clamps are the most overlooked part of any workshop, yet they are among the most important tool in the workshop. Woodworkers spend thousands of dollars on machinery, jiggs, blades and other tools. But the lowly clamp is constantly overlooked.

With the increase of cheap import products flooding the market, it becomes increasingly difficult to justify the cost of quality. Lets shed some light on the issue. If you can spend \$2.99 on a product that lasts for one year, or spend \$5.99 on a similar product that lasts more than 3 years, which product provides better value. Of course we all agree the latter. This is exactly what Bessey provides.

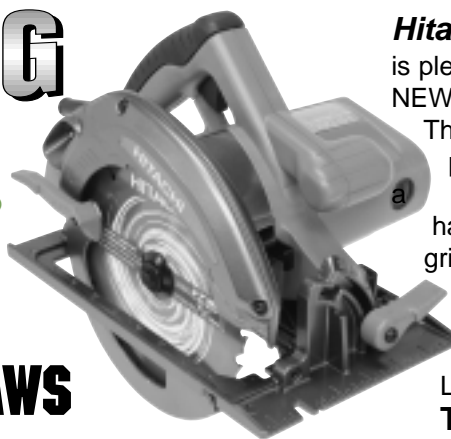

Bessey is considered the leader in the clamping industry due to its quality and innovation, since 1936 when they first began producing malleable bar clamps. Through their automated manufacturing operation, they have grown into the largest clamp manufacturer in the world, distributing some 1300 clamping tools in 90 countries.

As a result of Bessey's dedication to quality, they boast a defective rate of only 0.0001%. Bessey is fundamentally far different than any clamp company because they control every aspect of the manufacturing process from raw materials to the finished product:

**THAT'S THE BESSEY DIFFERENCE!**

# INTRODUCING HITACHI® POWER TOOLS NEW 7-1/4" CIRCULAR SAWS

### **Hitachi Power Tools...**

is pleased and excited to launch the NEW C7SB2 and C7BD2 circular saws.

These wood hungry 7-1/4" saws are powered by a 15 amp motor and boasts bevel capacity of 55°. A soft rubber grip handle promotes a solid, comfortable grip, while the magnesium guard and gear housing provide greater durability at a reduced weight. Both saws come with a molded case, a 24 tooth blade.

Look for this tool and more at...

**Comes with rip fence system**

**Rack & pinion height adjustment system**

**I**n 1994 Richard Hsu started Kempston Canada. He Began with just 10 sets, which he promoted through wood shows and a few select dealers.

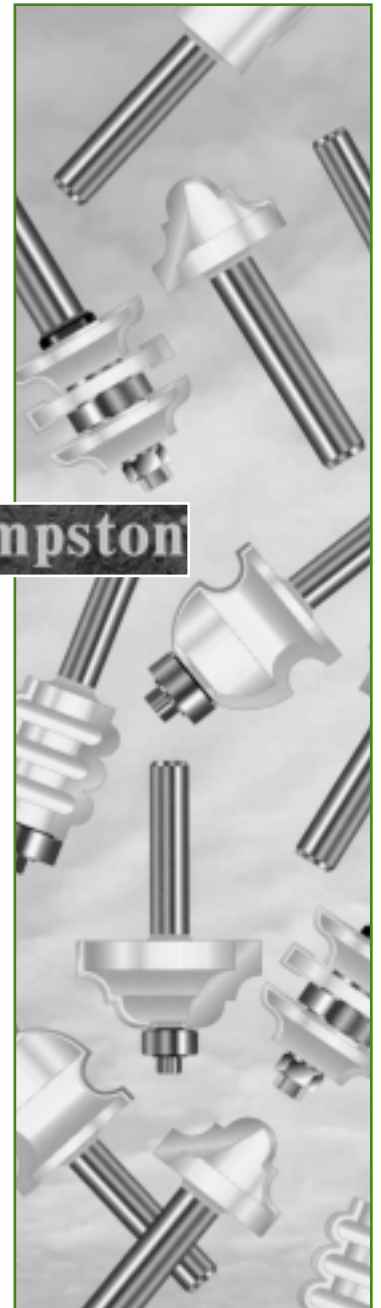

In a short period of time Kempston established a reputation for quality, performance and price, the demand for individual bits lead to the addition of almost 150 SKU's steadily increasing to more than 350SKU's by 1998.

The drive to expand the business lead Kempston to open more retail accounts and once again increase the numbers of profiles available. Today Kempston has established a strong identity through advertisements in major Canadian publications and active participation in significant wood and retail shows. It has accounts and representation in most provinces and offers one of the most comprehensive router bit selections in Canada.

We believe that Kempston's success in the router bit sector comes from our ongoing adherence to our company principles of quality, performance and price. We will soon be launching our new saw blade line which will be a perfect complement to our well established router bit business.

Our motto "Cutting through high prices with quality and performance" will apply to all Kempston products. We look forward to a long relationship with The Tool Junkie and wish them every success.

# Cutting-Edge TwinLaser™ System Beams

## DELTA Into A League Of Its Own!

September, 2002 - Guelph On - Delta Machinery launched today a one-of-kind 12" compound mitre saw with laser, model #36-255L. This saw incorporates an adjustable TwinLaser™ system that shows the exact line of cut on either side of the blade kerf, at any angle, bright enough for outdoor use, with or without the need to have the blade in motion. Combined with the user-friendly features in all Delta compound mitre saws, the model 36-255L will certainly stand in a category by itself.

Beginning with a powerful 15 amp, 120 volt motor (3500 rpm), the 36-255L offers the maximum cutting power available in the market. A large bevel scale and mitre lock design provides speed and convenience. Quick tilt settings are simple thanks to a large bevel scale with adjustable positive stops at 0° and 45°. Other lock features include a quick-action mitre lock for faster mitre settings and a built-in arbor lock for smooth, single wrench blade changes. Moreover, the mitre scale features nine positive stops for amazingly accurate cuts everytime. An attached dust bag collects fine dust particles and woodchips.

Performance and comfort features complete the 36-225L. The patented base design is convenient for either bench or job site 2x4 sawhorse mounting. An electric blade brake automatically stops in seconds, providing less waiting and more cutting. Sliding fences adjust for increased work support, and are extra tall for handling large work pieces or cutting crown molding on edge instead of flat on the table. A large, easy-grip handle is positioned horizontally to reduce operator fatigue and provide

better control during operation. Additionally, a see-thru blade guard covers the 40-tooth carbide-tipped blade at all times, and automatically retracts after each cut.

Geared toward applications such as framing, decking, chair, railing, trim work and cabinetry, the 36-255L comes complete with a premium 40T carbide-tipped blade, integrated left work extension, retractable blade guard, dust bag, wrenches and operating manual. The unit will be available and on the market in the Fall of 2002, expected selling price \$499.00.

Headquartered in Jackson, Tennessee, Delta Machinery, a subsidiary of Pentair Inc. (NYSE: PNR), is the leading manufacturer of the world's most complete line of woodworking machinery, stationary equipment and related accessories for use in home workshops, building and construction trades, industries and schools. With its manufacturing operation centralised in Tupelo, Mississippi, Delta owns and operates a subsidiary, Biesemeyer, located in Mesa, Arizona.
